Subject: Application for Backend Developer Role

Dear Hiring Manager,

I am a Senior Backend Developer with 8+ years of experience in Node.js, microservices, and cloud platforms (AWS, Azure, GCP). I have built scalable APIs, chatbot systems, and real-time video processing solutions using FFmpeg.

Currently, I work at Alembic Pharmaceuticals, where I develop high-performance backend systems and automation tools. Previously, I led a team delivering enterprise analytics and chatbot platforms integrated with BI tools.

I am passionate about building scalable, efficient systems and would love to contribute to your team.

Thank you for your consideration.

Sincerely,
Harsh Gohil
